Incident Severity Level Configuration

+ Add Severity Level

Configuration Policy (NFR-02)

Changing severity levels affects all active incident reports. The "Chart Lock Trigger" automatically restricts resident record modifications until the Director of Nursing (DON) approves the incident report.

SEVERITY NAME	COLOR INDICATOR	DESCRIPTION	CHART LOCK TRIGGER	ACTIONS
Low	HEX Mapped	Minor occurrences that do not impact resident safety or standard care protocols. Examples include administrative errors or minor property damage.	DISABLED	
Medium	HEX Mapped	Incidents that require internal investigation but no immediate medical intervention. Examples include medication timing variances or minor falls without injury.	DISABLED	
High	HEX Mapped	Significant events requiring immediate medical assessment or shift supervisor intervention. Examples include injuries requiring first aid or aggressive behavior.	ACTIVE	
Critical	HEX Mapped	Life-threatening events or regulatory breaches requiring immediate notification of authorities. Examples include medical emergencies or elopement.	ACTIVE	

Reset to Defaults

AUTOMATION LOGIC

- Locked charts prevent all SOAP note additions until the incident is marked "Reviewed".
- Critical severity triggers a 15-minute escalation SMS to the on-call medical director.

VISUAL COMPLIANCE

These color mappings are used throughout the Dashboard, Resident Profile, and EMAR screens to maintain visual consistency.
